

Chapter I, 3.0

This Contract is comprehensive with an objective to perform all necessary operational, coordination, and management functions at Y-12, PX, and SRTO (should this option be exercised) required to support NNSA and broader national security missions assigned to these sites. This includes but is not limited to all ongoing missions and functions, as well as those that may be assigned during the term of the Contract. It further includes all infrastructure management and maintenance; information technology; human resource management including critical skills recruitment and retention; environmental management; health, safety and security systems; and purchasing and other administrative systems.

A goal under this Contract is to ensure the enduring national security of the United States through the military application of nuclear energy. A specific objective is to obtain services to meet the production requirements derived from the nuclear weapons stockpile plan updated and released by the President of the United States annually. The Contractor shall function as the single integrating contractor for parts and material logistics within the NSE. The Contract shall provide a single management structure and interface to the Government for integrating production across the NSE.

In the execution of this Contract, and particularly program integration, the Contractor shall meet rigorous quality and reliability standards essential for the U.S. nuclear deterrent; maintain sufficient production capacity and produce at rates defined in planning documents; and implement flexible production management and execution processes to accommodate a dynamic national security environment. The Contractor shall balance risk management and cost reducing initiatives to provide increased value to the Government. This applies both internally to this Contract and to improving the overall cost efficiency of the NSE.

The Contractor shall be fully responsible and accountable for the safe and secure accomplishment of all work, whether performed by its own personnel or team members, including subcontractors. The Contractor shall be responsible for planning and coordinating production schedules; integrating, managing and executing the programs; supporting and executing large and small projects; and completing operations and other activities as described in this Statement of Work.

Chapter I, 3.1

(ix) Effectively partner with other Contractors ~~comprising within~~ the NSE to ~~include managing~~ manage the master schedule for all production activities and be responsible for the execution of uranium, high explosives, nuclear weapons assembly/disassembly, dismantlement, and surveillance functions in support of the Stockpile Stewardship Program.

Chapter II, 1.1.1

(ix) ~~Reference applicable documents related to the integrated production schedule~~ Effectively partner with other contractors within the NSE to manage the master schedule for all production activities and be responsible for the execution of uranium, high explosives, nuclear weapons

assembly/disassembly, dismantlement, and surveillance functions in support of the Stockpile Stewardship Program; and
